ABSTRACT

In one embodiment, the present invention determines an identification corresponding to a device and a user interface corresponding to the identification of the device is remotely loaded from a remote source. In another embodiment, a user

5   interface corresponding to the identification of the device is locally loaded from a local source. In yet another embodiment, a basic user interface corresponding to the identification of the device is loaded if a user interface corresponding to the identification of the device is not found by searching remotely or locally.
